# Our Products & Services

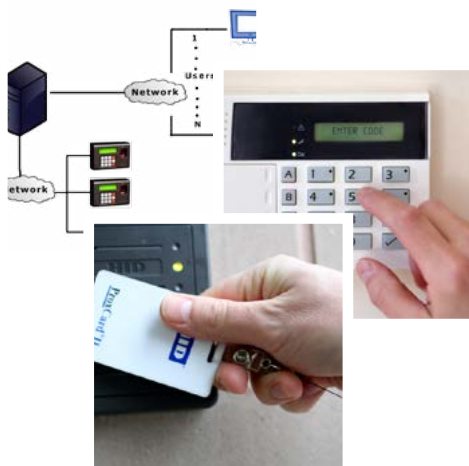

## Vehicle Security Solutions

Not just electronically tag each vehicle, but hook up LCD, blocker, gate and barrier giving a fully automated centrally controlled system.

Integrating cameras enhances this by providing live feeds and storing pictorial snapshots of the vehicles.

## Personnel Security Solutions

Central Management of authentication and authorization of all employees across all geographical locations. Stress-free working with our layered security levels. Customize further by printing employee RFID cards and integrating alarms and e-notifications.

## Biometric & RFID Attendance Solutions

Discover how your team is putting in the effort. Define organization wide work shifts & custom leave types. Assign shifts and schedules to employees. Drill down reports to one business office/department or to one specific individual employee. Increase your productivity by better managing your employees.

# Custom Security System

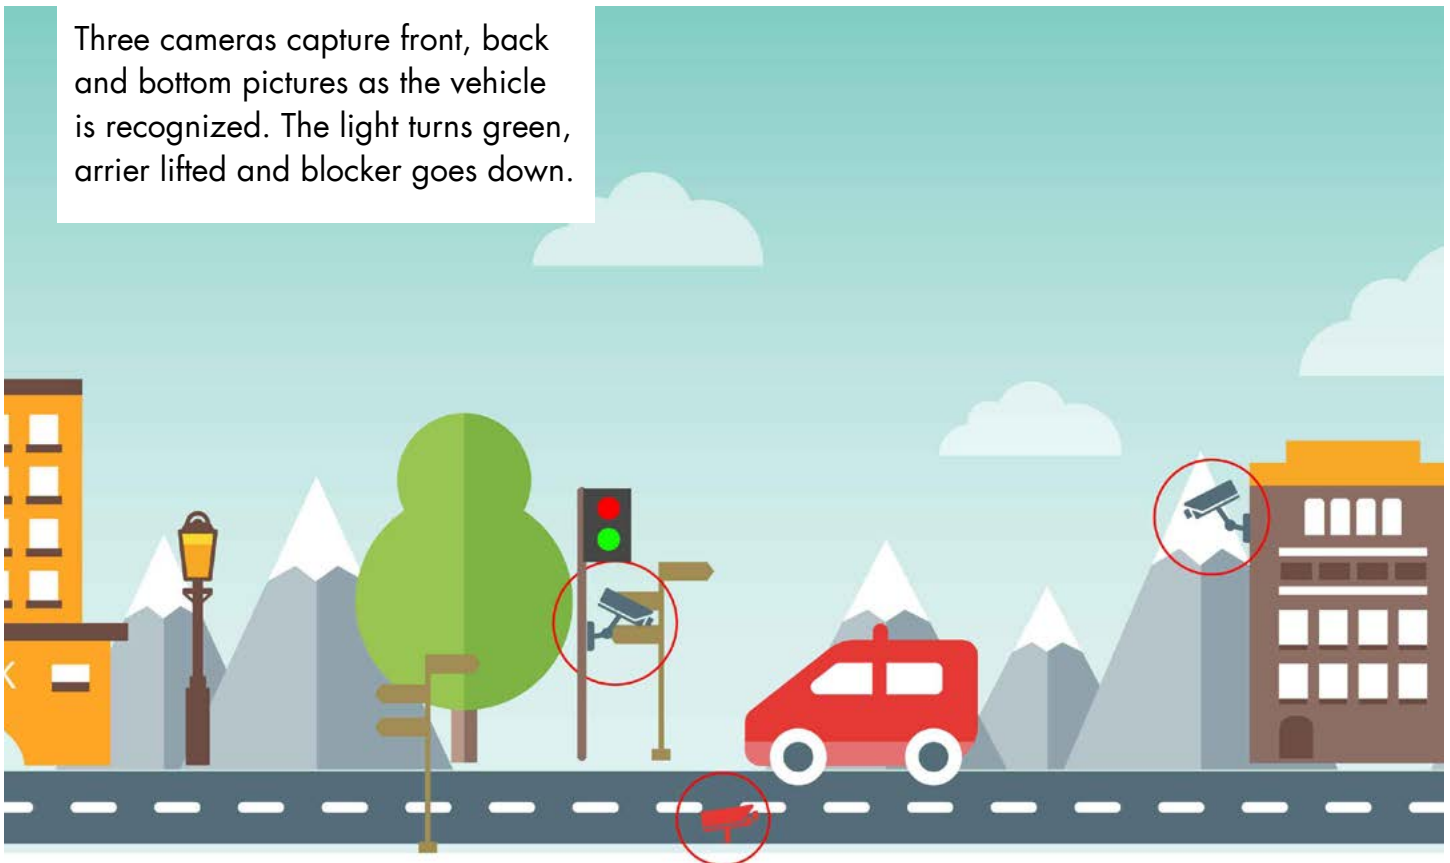

Get a custom designed security system completely aligned with your business needs. Be it authenticating every vehicle, motorcycle, or cycle to authenticating individuals via smart cards and/or biometrics. Or integrating live feeds from security cameras, to auto/manual control of boundary gates, barriers and road-blockers. Or hooking up automated alarm systems and/or lights to sending notifications like emails and/SMS.

Our open-source approach enables you to run your own software code security audit. Your success is our success.

You can choose and customize from your preferred vendors for varied equipment over diverse communication channels with everything hosted under your preferred environment.

## Vehicles Controlled Access Sample

Three cameras capture front, back and bottom pictures as the vehicle is recognized. The light turns green, barrier lifted and blocker goes down.

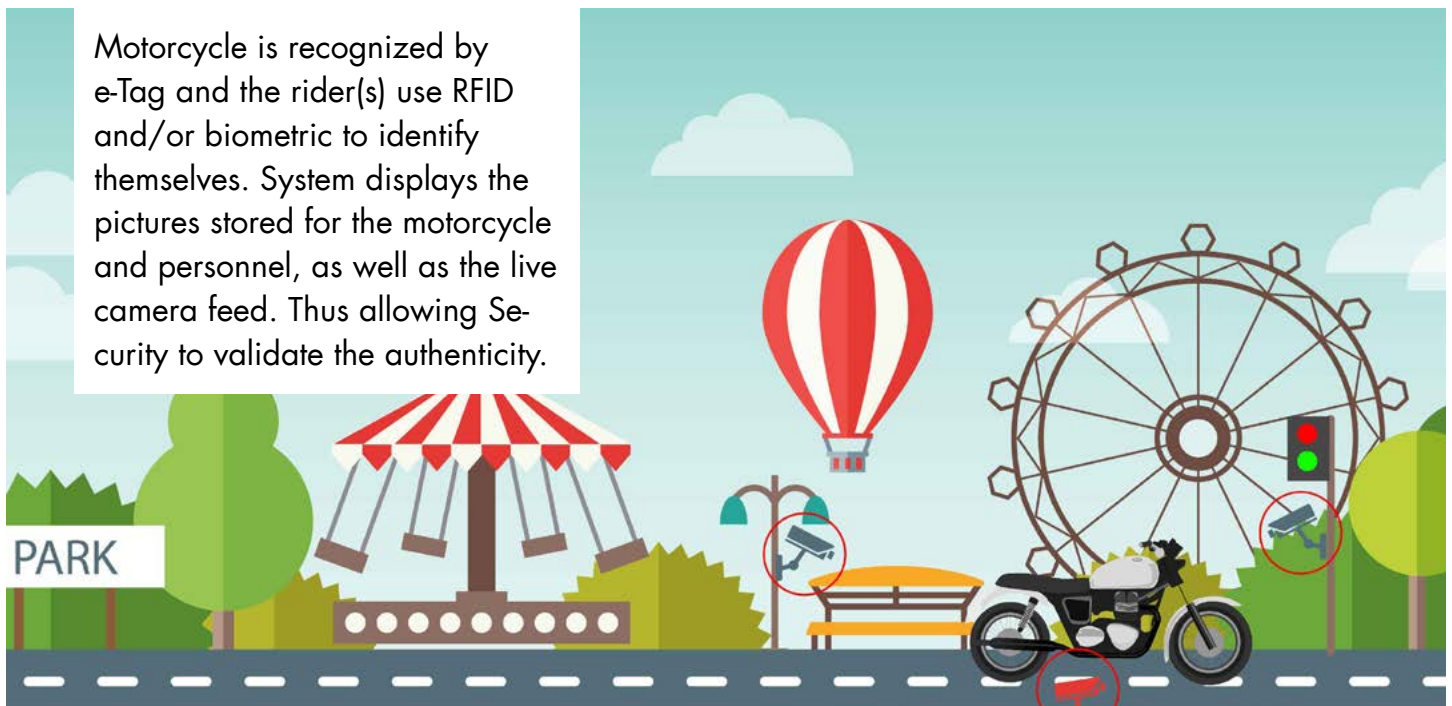

# Simplified Security Ops

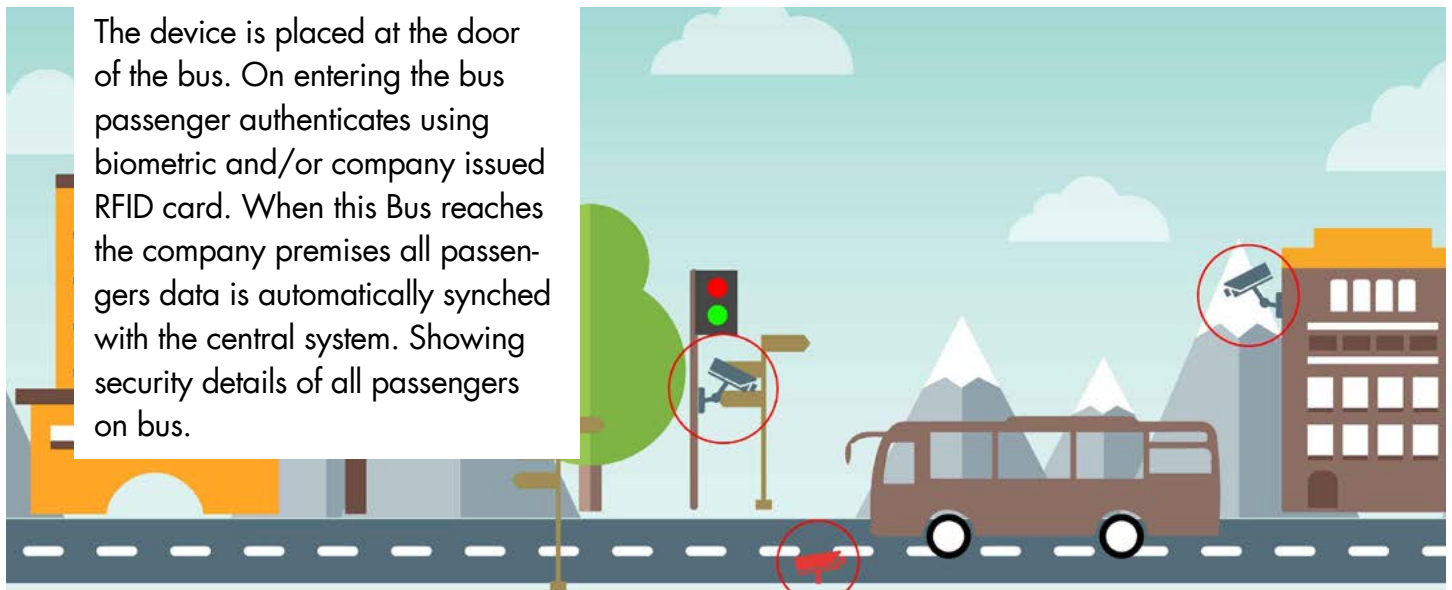

## Rider & Motorcycle Authenticated Access:

Motorcycle is recognized by e-Tag and the rider(s) use RFID and/or biometric to identify themselves. System displays the pictures stored for the motorcycle and personnel, as well as the live camera feed. Thus allowing Security to validate the authenticity.

## Bus & Passengers Authenticated Access

The device is placed at the door of the bus. On entering the bus passenger authenticates using biometric and/or company issued RFID card. When this Bus reaches the company premises all passengers data is automatically synched with the central system. Showing security details of all passengers on bus.

# On Premises

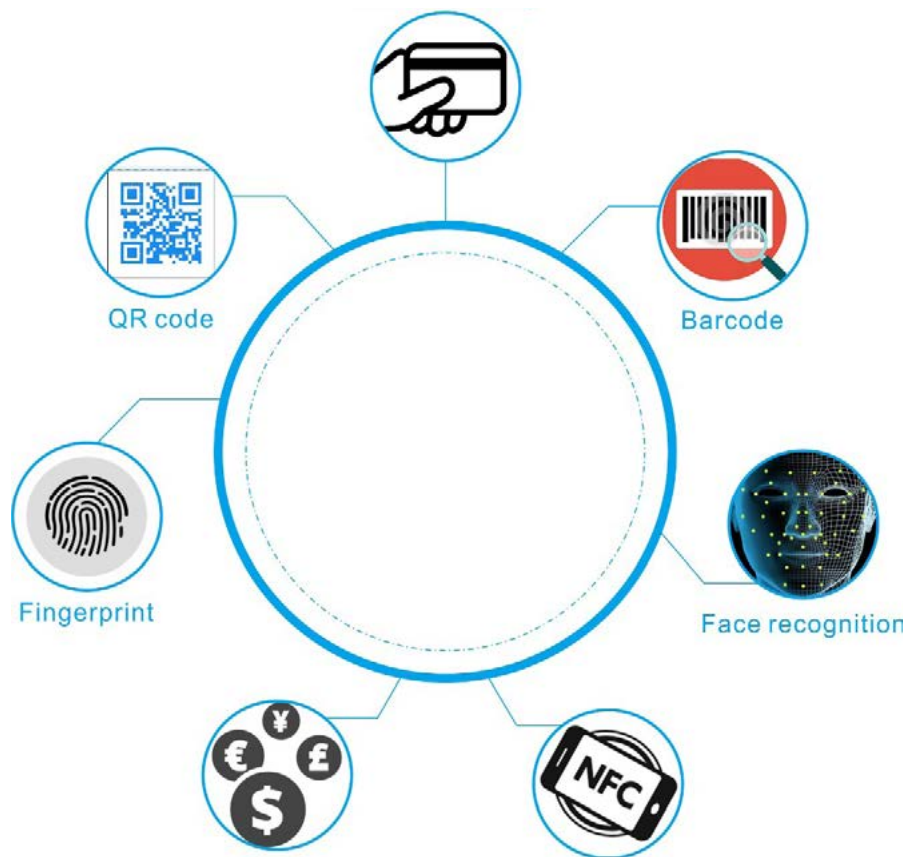

## Security Configure Secure Access Inside Buildings

Ensure that only authorized people are allowed access at specific areas inside each building complex. Define work schedules and assign employees to these work-shifts. Draw reports if anyone missed the shift or was outside the predefined work area boundary. Our outlook to work with multi-vendor equipment provides you a unique freedom to apply different security protocols and devices across different areas. All integrated and controlled from a central control dashboard.

Easily evolve your security system over time, integrating latest technologies, security protocols and organizational changes.

### Freedom to Configure & Use Varied Equipment:

With us you get the freedom to address security aspect of each business area uniquely. Like use turnstile for lobby entrance and a biometric door lock for individual offices opening for the authorized employees only.

# Integrate Security & Business Operations

Our holistic approach ensures that our solution helps enrich your regular business operations wherever possible. Example shown is a weight truck at weigh station RFID tagged, tracked and monitored under security system.

## Working Made Easy

## Interactive Dashboard & Drill-down Reports

Users have their own dashboards, with graphs and charts to better visualize information. A power report engine allows customized reporting. Integrate alarms and email to get most out of reports.

## Training Sessions, Online Help & Support

We conduct training sessions designed not around the System but for the type of users. Online help files available from with-in the software ensure user can get to information quickly. An online support ticket and tacking system is also setup to further facilitate users.

# NOT Some Generic Security System

We understand that each business setup is unique. With us you get the security system that YOU need. We have successfully delivered for government, semigovernment and private businesses, from financial to educational as well as security firms. Our Systems are never closed, allowing future expansion with inhouse technical skills at least costs.

Challenges our security systems address 24 x 7 include

- Vehicle entrance/exit control & monitoring with live camera feeds and automated blocker and barrier control for a business complex with multiple in-out gates.
- Employee biometric security credentials managed from central location for offices in different provinces, over heterogeneous channels (Satellite, DSL, 3G etc.).
- Central reporting of biometric attendance of 4000+ students and facility members spread across cities, in different buildings on different communication networks.
